DESCRIPCIÓN

Sheet chod manufactured with a robust steel body that guarantees great stability and durability during work. The machine features two lower rollers driven by gears that ensure a uniform power transmission and a steady and accurate bending process. The top roller is inactive and fits to define the desired curve radius according to the thickness and type of material. The rollers are hardened by thermal treatment, which gives them high wear resistance and a long service life even in hard materials such as stainless steel or carbon steel. The shafts of the rollers are built in special tempered and rectified steel, ensuring a smooth twist, precise alignment and superior resistance to deformation. It has adjustable guide rollers that facilitate the control of the material during the bending process, allowing to perform cylinders and parts with high precision. The machine offers the possibility of working both horizontally and vertically, adapting to different production needs and parts dimensions. The whole set has been designed and manufactured in accordance with the EC safety directives, ensuring reliable and safe operation. It is an ideal machine for metal workshops, boilers and companies dedicated to the manufacture of curved structures and components, offering

DATOS TÉCNICOS

Alimentación	380V-F3
Potencia	1.5 / 2,2 - 2 / 3 Kw-Hp
Max. steel pipe capacity	70X2 mm.
Max. square steel capacity	50X50X3 mm.
Max. steel rod capacity	35 mm.
Max. steel folding capacity	6X10 mm.
Peso Neto/Bruto	350 / 400 Kg.

Dimensiones	900X1355X1400 mm.
