Motorized profiles FTX-35-CTK

DESCRIPCIÓN stant and precise material. The upper roller is inactive and adjusted to define the desired curved to the thickness and type of material. The rollers are hardened by heat treatment, which gives them high wear resistance and a long service life even in work with hard materials such as stainless steel or carbon steel. The axes of the rollers are constructed in special temperate and grinding steel, guaranteeing a soft turn, an accurate alignment and a superior resistance to deformation. It has adjustable guide rollers that facilitate the control of the material during the curved process, allowing cylinders and parts with high precision. The machine offers the possibility of working both horizontally and vertical, adapting to different production needs and dimensions of the pieces. The whole set has been designed and manufactured according to the EC security directives, ensuring reliable

DATOS TÉCNICOSFeed380v-f3Power1.5 / 2,2 - 2/3 kW-HPMax. Steel tube capacity70x2 mm.Max. Steel square capacity50x50x3 mm.Max. Steel rod capacity35 mm.Max. Steel plethin capacity6x10 mm.Net / crude weight350/400 kg.

Dimensions 900x1355x1400 mm.
