ARTÍCULO

Spot Gyspot 2600 230V-F1

DESCRIPCIÓN

The GYSPOT 26.02 is an ideal tool for the unbollaged and the correction of elements of little thick body with its 2600A power (hood, door, roof, etc). It has several functions that make it a complete and equivalent tool. It can be plugged into a 230V jack for its weak consumption. 3 modes of use: • Star or ring soldering for stretching of sheets. • Wavy welding, ideal for repairing a rounded perfi (eg: wheel passage) • Contraction, for light impacts and finite work. • Intuitive: the potentiometer allows to select the power and the desired mode at the same time. • Automatic: The welding point is performed by simple contact between the machine and the piece that straightens.

DATOS TÉCNICOS

Voltage	230V/F1
Fuse	16 Amp.
Open circuit voltage	5.4 Volt.
AMP power.	2600 amp.
Length Cables	1.8 + 1.7 m.
Weight net-gross	151/176 kg.
Dimensions	200x320x180 mm.
